Fundamentals of Semiconductor Lasers (Springer Series in Optical Sciences)

Takahiro Numai

Fundamentals of Semiconductor Lasers (Springer Series in Optical Sciences) Takahiro Numai

This book explains physics under the operating principles of semiconductor lasers in detail based on the experience of the author, dealing with the first manufacturing of phase-shifted DFB-LDs and recent research on transverse modes.

The book also bridges a wide gap between journal papers and textbooks, requiring only an undergraduate-level knowledge of electromagnetism and quantum mechanics, and helps readers to understand journal papers where definitions of some technical terms vary, depending on the paper. Two definitions of the photon density in the rate equations and two definitions of the phase-shift in the phase-shifted DFB-LD are explained, and differences in the calculated results are indicated, depending on the definitions.

Readers can understand the physics of semiconductor lasers and analytical tools for Fabry-Perot LDs, DFB-LDs, and VCSELs and will be stimulated to develop semiconductor lasers themselves.

From reader reviews:

Robert Franco:

In this 21st century, people become competitive in each and every way. By being competitive right now, people have to do something to make themselves survive, being in the middle of the actual crowded place and notice simply by surrounding. One thing that often many people have underestimated it for a while is reading. Yes, by reading a reserve your ability to survive raise then having chance to endure than other is high. For you who want to start reading a new book, we give you this Fundamentals of Semiconductor Lasers (Springer Series in Optical Sciences) book as beginning and daily reading publication. Why, because this book is usually more than just a book.

Douglas Leverette:

The e-book untitled Fundamentals of Semiconductor Lasers (Springer Series in Optical Sciences) is the e-book that recommended to you to see. You can see the quality of the e-book content that will be shown to you. The language that author use to explained their ideas are easily to understand. The copy writer was did a lot of analysis when write the book, and so the information that they share for you is absolutely accurate. You also could get the e-book of Fundamentals of Semiconductor Lasers (Springer Series in Optical Sciences) from the publisher to make you far more enjoy free time.

James Drennan:

That reserve can make you to feel relax. This particular book Fundamentals of Semiconductor Lasers (Springer Series in Optical Sciences) was vibrant and of course has pictures around. As we know that book Fundamentals of Semiconductor Lasers (Springer Series in Optical Sciences) has many kinds or type. Start from kids until teens. For example Naruto or Private investigator Conan you can read and believe that you are the character on there. Therefore not at all of book usually are make you bored, any it makes you feel happy, fun and rest. Try to choose the best book for you and try to like reading this.

Erica Northern:

A lot of book has printed but it is unique. You can get it by world wide web on social media. You can choose the most beneficial book for you, science, comedian, novel, or whatever by searching from it. It is referred to as of book Fundamentals of Semiconductor Lasers (Springer Series in Optical Sciences). You can contribute your knowledge by it. Without making the printed book, it might add your knowledge and make you happier to read. It is most essential that, you must aware about e-book. It can bring you from one destination to other place.
